PROJECTS

Wi-fi based home automation using node mcu

Wi-fi is controlled by using a Blynk android application instead button method. Here only needs to touch the button in Blynk android application to control the electrical equipments in on and off conditions. So here Blynk android application is used as a transmitting device and indult wi-fi module placed in the electrical equipments is used as a receiver. Blynk android application will transmit command using wi-fi to the electrical equipments so that it electrical equipments depend up on the required condition.

Portfolio Website

Developed a responsive and animated personal portfolio showcasing skills, projects, and contact form with creative front-end design and smooth scroll effects.

CERTIFICATIONS

- Certification of appreciation in web development for beginners-simplilearn
- Introduction to Generative AI – Google Cloud Skills Boost

ACHIEVEMENTS

- Designed and deployed multiple responsive websites
- Integrated animations and accessibility features for improved UX
- Leveraged AI tools for efficient web design workflows
